REMOTE PATIENT
MONITORING
For the healthcare underserved

Evexia

WHY EVEXIA?

Nationwide, **41%** of people covered by Medicare don't have an internet-capable computer or smartphone at home
Harvard Medical School

The Problem

- Current RPM solutions require patients to be familiar with the use of smartphones, the internet and with sufficient financial means for both.

- The less the technical skills and resources a patient has, the more the health provider carries the burden of support.

- This is magnified in rural or inner-city areas where Wi-Fi, internet or power is less reliable.

- This makes RPM unprofitable to providers and thus unavailable to those populations that most need it.

The Solution

1. Removes the Communications Hurdle
Works without Wi-Fi, smartphones or cellular plans
Works worldwide on the very edge of mobile connectivity, handles service interruptions

2. Removes the Technical Knowledge Hurdle
No smartphone or electronic device to configure, maintain or use
No keyboard, mouse or screen to use

3. Removes the Financial Hurdle
No smartphone or internet access required for the patient
No costly technical support required by the provider

Evexia
EvexiaTelehealth.com

Access

Reach patients with chronic conditions lacking technical skills or reliable infrastructure

Cost

- No purchase of smartphones or internet access
- Massive decrease in providers support cost
- Maximize CMS/insurance reimbursements

Outcomes

- Facilitate patient engagement for better compliance
- Better and timely data for Care Plans
- Focus provider resources on key patients
